

Trump is Turning Factory Lights On Throughout the Country!

“Build the country, not your portfolio!” – President Trump, May 1, 2025

May 2025 – In the United States, based on President Trump’s agenda, abandoned factories are refurbished and their lights turned on; whole new facilities are being built, particularly in the advanced energy sector—fossil fuels and nuclear.

In Europe, still captive to the Globalist Green insanity, the entire Iberian peninsula was plunged into darkness last week as a consequence of religious devotion to Net Zero. Yet, Spain had a GDP growth of 3.2% according to this fake measure, one of the fastest in Europe. In the EU and UK, that GDP figure is mandated to include the black or illegal economy of prostitution, drug trafficking, and sex trafficking. The blackout showed GDP’s ultimate uselessness for measuring economies..

According to physical economist Brian Lantz, the U.S. economy is undergoing a profound shift toward production-driven growth, under President Trump, rejecting flawed consumption-based metrics like GDP. True wealth is found in physical production—manufacturing, energy, and infrastructure—rather than financial transactions or imports, which are unsustainable.

President Trump’s national energy emergency declaration prioritizes tangible economic outputs over speculative financial metrics. Here’s a summary:

- **Coal and Natural Gas Revival:** Trump’s April 2025 executive orders halted coal plant closures, extending the life of facilities like those of Georgia Power, Duke Energy, and Rocky Mountain Power, leveraging the U.S.’s vast coal reserves (the world’s largest, per the U.S. Energy Information Agency). This shift saves paid-off plants, reducing capital costs. Additionally, major natural gas projects, such as NRG Energy’s 5-gigawatt combined cycle plants and ExxonMobil’s 1.5-gigawatt data center plant, are set to bolster grid reliability, countering warnings of instability from groups like NERC.
- **LNG Export Expansion:** Trump’s reversal of the Biden-era LNG export moratorium has spurred projects like Venture Global’s Plaquemines LNG and Cheniere Energy’s Corpus Christi Stage 3, with a projected 21% rise in LNG feedgas demand in 2025. This creates thousands of blue-collar jobs and boosts export earnings, supported by new pipeline infrastructure.
- **Oil/ Gas and Nuclear Production:** Crude oil production is forecast to rise from 11.15 million barrels/day in Q1 2025 to 11.5 million by Q4, driven by the Permian Basin. Trump’s executive order, *Unleashing Alaska’s Extraordinary Resource Potential*,

reopens Arctic National Wildlife Refuge leasing and advances the \$44 billion Alaska LNG project, enhancing energy independence. A nuclear renaissance is also underway, particularly with respect to efficient small nuclear reactors; fusion breakthroughs are a national security imperative.

- **Infrastructure and Mining:** The U.S. Army Corps of Engineers identified 600 projects that can be fast-tracked, including the Enbridge Line 5 tunnel, under Trump's energy emergency provisions. Critical minerals projects (lithium, coal, phosphate, copper) are prioritized via the FAST-41 program, aiming to reduce import dependency and support domestic manufacturing.
- **Steel and Aluminum Production:** Trump's 25% tariffs on steel and aluminum imports address the U.S.'s reliance on foreign supplies (25% of steel, 50% of aluminum). New facilities, like Hyundai's Louisiana steel mill and Chance Aluminum's Pennsylvania plant, signal a revival of domestic production, critical for industries like electric vehicles and defense.

- **Auto Industry Reshoring:** Trump's tariff adjustments incentivize domestic auto production, with reimbursements for imported parts and no tariffs on steel for U.S.-built cars. Companies like Toyota, Hyundai, and Honda are investing in U.S. plants, supported by the UAW, which sees job growth potential. This counters decades of offshoring, where U.S. auto R&D lagged at 16% of global spending in 2023

- **Investment Surge:** \$5 trillion in investment commitments from companies like IBM (\$150 billion) and Merck (\$9 billion), driven by Trump's industrial policy, as articulated by Commerce Secretary Howard Lutnick. Manufacturing grew 5.1% in Q1 2025, with equipment orders up 22.5%.

This production focus contrasts with the globalist financial oligarchy's reliance on consumption metrics, just like the colonial-era exploitation, which resulted in the Boston Tea Party. There was a 0.3% GDP dip in April 2025 due to import surges, which the Trump haters claim somehow shows a shrinking economy. It's a transitional "Biden overhang," President Trump points out, as Trump's policies foster new optimism and a production-based economic renaissance
